On-page SEO for Izart Studio

A practical guide to headings, content, metadata, images and internal links for the redesign.

Core principle: Give every page one clear subject, a logical structure, useful content and relevant links. Keep the visual design expressive while making the underlying HTML understandable.

01 / Heading tags

Tag	Purpose	Izart example
<h1>	Main page subject; use one per page as a project convention.	Brand Identity Development
<h2>	Major sections of the page.	Our Process / Selected Projects
<h3>	Subsections within an H2 section.	Brand Workshop / Visual Identity
<h4>	A further subsection, only when needed.	A specific workshop activity
<p>	Body copy, labels and supporting descriptions.	Written by Akash Kalra
<a href="...">	Navigate to a page, resource or section.	Explore our branding projects
<button>	Perform an action on the current page.	Open menu / Copy article link

One H1 is a useful consistency rule, not a special ranking requirement. Nest headings logically; do not jump to H4 just to obtain a smaller font. Use CSS to control appearance.

Avoid these common mistakes

• Do not turn every large label, statistic or CTA into a heading.

• Do not put the main heading only inside an image, video or canvas.

• Do not repeat keywords in every heading. Describe what each section actually contains.

Google recommends making the main page title clear and distinctive. Read its title guidance.

Heading structures

Suggested structures for the redesigned pages. Preserve established search intent and valuable existing copy; these examples are not a replacement for keyword research.

Page	Suggested H1	H2 sections
Homepage	A clear description of Izart's offering, or the existing headline with descriptive supporting copy	Selected Work; Our Services; About Izart; Client Testimonials
Brand identity	Brand Identity Development	What We Deliver; Our Process; Branding Projects; FAQs
Website services	Website Design and Development	Capabilities; Our Process; Website Projects; FAQs
Projects listing	Brand Identity and Digital Design Projects	Individual project titles
Project detail	Seraano: Luxury Real Estate Branding	The Brief; Strategy; Visual Identity; Applications; Outcome
Blog listing	Insights on Branding and Design	Individual article titles
Blog article	The full article title	Main topics; FAQs; Related Articles
Author profile	Akash Kalra	About Akash; Experience; Articles
Careers	Careers at Izart Studio	Working at Izart; Open Positions

A service-page outline

```
H1  Brand Identity Development
    Intro: what the service is and who it helps
H2  What Your Brand Identity Includes
    H3  Visual Identity
    H3  Verbal Identity
H2  Our Brand Identity Process
    H3  Research and Brand Workshop
    H3  Creative Direction
    H3  Design and Implementation
H2  Selected Branding Projects
H2  Frequently Asked Questions
```

Accordion questions can use accessible summary elements. They do not all need a heading tag. On a blog listing, article titles are H2s; inside an article, its title becomes the H1.

Intent and metadata

02 / One primary intent per page

URL	Reader intent
/brand-identity	Evaluate brand identity services.
/website-design-and-development	Evaluate website design and development services.
/projects/seraano	Assess evidence of Izart's work.
/blogs/[article-slug]	Research the article's specific question.

Use the topic naturally in the title, H1, introduction and relevant sections. Avoid creating several pages with substantially identical content aimed at the same search need.

Explain who the service helps, what you deliver, how you work and why the approach is useful. Support claims with real projects and verifiable outcomes. There is no universal word-count or keyword-density target.

03 / Metadata for every indexable page

• Write a unique, descriptive title and an informative meta description.

• Set the correct canonical URL and appropriate indexing directives.

• Provide relevant Open Graph and Twitter titles, descriptions and images.

```
<title>
  Brand Identity Development Services | Izart Studio
</title>

<meta name="description" content="Build a distinctive
brand with Izart Studio's brand identity services,
combining strategy, visual identity, and verbal expression.">

<link rel="canonical"
  href="https://www.izart.in/brand-identity">
```

Keep titles concise and descriptions useful. Character counts are editing guides, not hard Google limits. Google may choose different search-result titles or snippets.

04 / Preserve SEO during the redesign

• Keep existing URLs and published slugs stable. A title edit should not automatically change a slug.

• Keep valuable text and contextual links. If a URL genuinely changes, use a direct permanent redirect to its relevant replacement.

• Do not leave production pages noindex. Keep staging and previews protected from indexing.

Images, links and checks

05 / Images and internal links

• Describe meaningful images in alt text: *Seraano wordmark applied to villa stationery*. Use empty alt text for decorative images.

• Reserve image dimensions, use responsive image sizes, prioritize the actual hero image and lazy-load images further down the page.

• Keep essential content in HTML. Artwork can support the explanation but should not be its only source.

• Link services to relevant projects and articles. Link articles back to useful service pages when the context fits.

• Use descriptive anchor text, such as *Explore our brand identity services*, and real anchor elements with href attributes.

06 / Before publishing each page

[ ] Clear subject and one meaningful H1.

[ ] Logical H2/H3 hierarchy and readable supporting copy.

[ ] Unique title and meta description.

[ ] Correct canonical and indexing settings.

[ ] Accurate content with real evidence for claims.

[ ] Relevant internal links with no broken destinations.

[ ] Meaningful image alt text and reserved dimensions.

[ ] Author and accurate dates on articles.

[ ] Structured data matches visible content.

[ ] Essential content and links available before JavaScript loads.

[ ] Mobile layout, accessibility and performance checked.

[ ] Existing URL, important copy and inbound-link destination preserved.
